HEAT-RELATED ILLNESSES

WHAT TO LOOK FOR

WHAT TO DO

HEAT STROKE

- High body temperature (103°F or higher)
- · Hot, red, dry, or damp skin
- · Fast, strong pulse
- Headache
- Dizziness
- Nausea
- Confusion
- Losing consciousness (passing out)

- Call 911 right away-heat stroke is a medical emergency
- · Move the person to a cooler place
- Help lower the person's temperature with cool cloths or a cool bath
- Do not give the person anything to drink

HEAT EXHAUSTION

- · Heavy sweating
- · Cold, pale, and clammy skin
- · Fast, weak pulse
- Nausea or vomiting
- Muscle cramps
- Tiredness or weakness
- Dizziness
- Headache
- Fainting (passing out)

- · Move to a cool place
- · Loosen your clothes
- Put cool, wet cloths on your body or take a cool bath
- · Sip water

Get medical help right away if:

- · You are throwing up
- · Your symptoms get worse
- · Your symptoms last longer than 1 hour

HEAT CRAMPS

- Heavy sweating during intense exercise
- Muscle pain or spasms

- Stop physical activity and move to a cool place
- Drink water or a sports drink
- Wait for cramps to go away before you do any more physical activity

Get medical help right away if:

- · Cramps last longer than 1 hour
- · You're on a low-sodium diet
- · You have heart problems

SUNBURN

- · Painful, red, and warm skin
- . Blisters on the skin

- Stay out of the sun until your sunburn heals
- Put cool cloths on sunburned areas or take a cool bath
- Put moisturizing lotion on sunburned areas
- · Do not break blisters

HEAT RASH

- Red clusters of small blisters that look like pimples on the skin (usually on the neck, chest, groin, or in elbow creases)
- · Stay in a cool, dry place
- · Keep the rash dry
- Use powder (like baby powder) to soothe the rash
